Our Users

Built on Data

Three Personas

Surfaced from 15,204 HRS respondents via K-Means
clustering

Each has a distinct insurance posture, disease burden, and digital comfort → and a distinct opportunity for AARP

PERSONA 01

The Aging Independent

34%

of the audience

Insured:	14% (URGENT)
Avg age:	59
Conditions:	1.8 avg
Digital:	Mobile-first
Tone:	Self-reliant

Highest urgency, least protected. Triggered by aging in place and spouse loss.

PERSONA 02

The Chronic Fighter

23%

of the audience

Insured:	11% (LOWEST)
Avg age:	65
Conditions:	3.24 avg
Digital:	Heavy reader
Tone:	Pragmatic

Heaviest disease burden. Wants drug pricing, condition management, plan utilization.

PERSONA 03

The Planful Pre-Retiree

43%

of the audience

Insured:	41%
Avg age:	79
Conditions:	1.1 avg
Digital:	Cross-device
Tone:	Forward-looking

Most receptive to forward guidance — finance, transitions, plan comparison.

Our personas span across ages and demographics, creating disparate needs for AARP to answer

Features include poor self-health, chronic condition, age, income, education, activity, cognition, and ADL limits

The Analysis

Understanding what our users care about

Content Gap Analysis

Topic taxonomy · Temporal lag · Semantic coverage ·
Persona × gap matrix

Topic taxonomy view: AARP dominates high-trust healthcare topics but within a narrow scope

Topic Importance Gap: AARP dominates Medicare; NYT dominates the broader news cycle

Each bubble is a topic; size is total article volume. The dashed line is parity. Above the line, AARP over indexes; below NYT does.

Semantic: AARP shows constrained semantic coverage relative to NYT's broad content landscape

AARP's content is largely embedded within NYT's semantic space, concentrated in health-related domains with focused coverage strategy but limited expansion into broader topic areas.

NYT covers a broader range of topics

AARP content is highly concentrated

Persona x Gap Matrix: Each persona cares about a different content gap

Cell color = relative salience to the persona, derived from HRS demographic + health features.

CONTENT GAP	Aging Independent	Chronic Fighter	Planful Pre-Retiree	EDITORIAL IMPLICATION
Drug Pricing	Low	High	Med	Lead with cost transparency for Chronic Fighter; pair with savings tools for Planful.
Cancer Care	Low	High	Low	Condition-management editorial — Chronic Fighter primary.
Plan Selection	High	Med	High	Aging Independent + Planful: head-to-head plan comparison tools.
Politics & Policy		Low	Med	Light explainer for Planful; off-strategy for Aging Independent.
AI & Tech			Med	Targeted “what AI means for you” series — Planful only.
Weather & Climate	Low	Low	Low	Service journalism — health-impact angle.
Electric Vehicles			Low	Low priority — defer until other gaps are closed.

The Analysis

Bridging the gap between content gap and personas

Subtopic Analysis

Long-Term Analysis and Blind Spots

AARP Dominates Plan Enrollment, NYT Leads Mental Health and Healthcare Policy

AARP/ NYT coverage ratio by healthcare category. Dots to the right = AARP advantage; left = NYT advantage.

Mental Health Crisis and Public Health Are the Untapped Opportunities for AARP

Three categories where NYT Leads → are the hidden gaps worth exploring.

Healthcare Policy & Reform

NYT 4.6x · trend ▼ 34.8%/yr

BLIND SPOT

Public Health NYT: 157 articles · AARP: 0. Highest TF-IDF severity score. Core missed theme.

Trend note

Topic volume declining ~34.8%/yr → market saturating. AARP must find differentiated angles before window closes.

Mental Health

NYT 6.4x · trend ▼ 19.9%/yr

WORTH EXPLORING

Mental health crisis — NYT: 27 articles · AARP: 0. NYT coverage skewed toward COVID/country-level, creating an opening for AARP’s member-focused lens.

Trend note

Volume declining ~19.9%/yr. Existing coverage is COVID-era. A fresh aging/loneliness angle remains viable.

AARP Blind Spot Intersections

AARP articles across all intersections below → sorted by NYT volume.

Blind spot intersection	NYT articles	AARP articles
Hospital Care × AI & Technology	246	0
Hospital Care × Politics & Legislation	80	0
Healthcare System & Access × AI & Technology	64	0
Healthcare Policy & Reform × Global Health	60	0
Mental Health × AI & Technology	60	0
Healthcare Policy & Reform × Politics & Legislation	59	0
Healthcare System & Access × Politics & Legislation	57	0
Hospital Care × Children & Family	46	0
Mental Health × Children & Family	40	0
Healthcare Policy & Reform × Children & Family	33	0

The Outcome

Personalized Health Plan Recommendations

Health & Wealth Hub

Empowering Generations

Medicare plan choice varies widely by state, creating a need for location-based guidance

LifeSync can simplify this by filtering plans based on location, health needs, and budget.

Top markets by plan complexity

Florida: 621 plans

Texas: 435 plans

California: 414 plans

Higher Medicare premiums do not reliably signal better plan quality

Both low- and high-premium plans appear in high- and lower-quality segments, making value difficult for members to judge from price alone.

LifeSync can help members **identify true value** by combining premium, quality rating, drug support, and care performance.

More than half of Medicare plans show enrollment movement, creating a timing opportunity for LifeSync

Only 49.1% of plans remain stable. The rest are either losing or gaining members, showing that Medicare users continue to reassess their plan choices over time.

LifeSync role:

Send **personalized plan** review reminders during key decision windows.

LifeSync bridges the gap between who members are and what they actually need

If **you** know more people like **Judy**,
you'll understand the **value** of our
solution.

Help us make it happen!

From a single member to the right healthcare plan, in five steps.

A multi-stage analytical pipeline that segments members into three personas from RAND HRS, Pew Research, and CDC BRFSS using KMeans clustering; quantifies editorial blind spots through bidirectional cosine similarity, BERTopic topic modeling, composite importance scoring, temporal lag analysis, intra-topic semantic spread, UMAP semantic territory mapping, and cross-source centroid alignment, all run on the live AARP and NYT corpora inside the enclave; deepens the gap picture through subtopic clustering with TF-IDF severity scoring and long-term trend analysis to surface unaddressed sub-themes like public health and mental health crisis; validates demand signals externally via Google Trends and zero-shot NLP classification across 80 health policy publications; bridges persona health profiles to AARP's trusted editorial strengths through subtopic semantic analysis; and feeds two algorithm layers, persona-level content matching and real-time behavioral personalization, culminating in plan recommendations scored against the CMS Landscape dataset, driving empowerment, engagement, and revenue.
